Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1,2,4-9 and 11-20, drawn to a method of making a transgenic fish by nuclear transfer wherein the transgene is introduced in culture into the cell obtained from a fish and wherein the transgene is randomly inserted in to the genome.

Group II, claim(s) 1-9 and 11-20, drawn to a method of making a transgenic fish by nuclear transfer wherein the transgene is introduced in culture into the cell obtained from a fish and wherein the transgene is integrated into the genome by homologous recombination to cause a gene inactivation.

Group III, claim(s) 10, drawn to a transgenic fish comprising a randomly integrated transgene encoding a gene product.

Group IV, claim(s) 10, drawn to a transgenic fish comprising a gene-targeted gene disruption inserted by homologous recombination.

Group V, claim(s) 11,12 and 18-20, drawn to a method of making a non-transgenic fish by nuclear transfer.

Group VI, claim(s) 11-16 and 18-20, drawn to a method of making a transgenic fish by nuclear transfer wherein the transgene is introduced other than in culture of the cell obtained from a fish, i.e. the cell is obtained from a transgenic fish.

Group VII, claim(s) 21, drawn to a non-transgenic fish made by a method of nuclear transfer.

The inventions listed as Groups I-VII do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The inventions listed as Groups I-VII do not relate to a single general inventive concept because they lack the same or corresponding special technical feature. The "special technical feature" of Group I is cloning by nuclear transfer which is shown by McCreath *et al.* (Nature, 405:1066-1069, 2000) to lack novelty or inventive step and does not make a contribution over the prior art.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.
